SecurityCenter

Unified Security Platform
Be Secure. Today & Tomorrow.

Security Center is Genetec's unified security platform that seamlessly blends Genetec IP security systems within a single intuitive interface to simplify your operations. Take advantage of a highly flexible platform and industry-renowned security systems to match your organization's security needs.

Security at the Center of Your Business

Security that Evolves with You

Maintain freedom to grow your system and integrate with preferred third-party technology. Deep integration with our partners' technology means that you can take full advantage of third-party products, as they were intended.

Unify Your Security Solutions

Choose from modular security systems, building a system that matches your requirements. Advanced security features will ensure that you are prepared to address changing incidents and events.

Depend On Security Without Interruption

Leverage the most advanced possibilities for uninterrupted system access and data protection. When you have critical assets to protect, rely on a security system that provides continuous access and that tolerates hardware failures without any system interruption.

Solution Components

Security Center merges three main security applications, including video surveillance, access control, and license plate recognition, in a single intuitive solution. The platform can also incorporate third party security and business systems for a completely unified management solution.

AutoVu

AutoVu™ is the IP license plate recognition (LPR) system of Security Center. Organizations looking to enhance applications in law enforcement, parking enforcement, license plate inventory, security and access control choose AutoVu to automate the identification of vehicle license plates.

Omnicast

Omnicast™ is the IP video management system of the Security Center platform that provides organizations of all sizes the ability to deploy a surveillance system that truly matches their security needs. With support for a wide range of industry-leading cameras, encoders and CCTV equipment, Omnicast is built to scale and adapt to the changing demands of your security department.

Synergis

Synergis™ is the IP access control system of Security Center, enabling you to reduce deployment time and cost by providing unmatched hardware freedom, while providing seamless management management of doors, cardholders, visitors, credentials, and badge production.

Extend Your Capabilities Under a Single Platform

Security Center allows you to extend core functionality and unify third-party security and business systems. Add additional capabilities to a single platform and interface from which you can control of all operations.

Integrate Your Business Systems:

Incorporate external operational applications and data, including point-of-sale, building automation, HVAC, and HR systems directly within Security Center to centralize information and ensure a highly efficient workflow. A feature rich SDK also gives you the freedom to develop your own custom tools that leverage video, access control, and LPR functionality, as well as the ability to connect and share data with external databases.

Plan Manager:

Plan Manager is a module of Security Center that provides interactive mapping functionality to visualize and navigate your facilities, allowing you to intuitively manage your cameras, doors, intrusion devices, and other security systems.

Security Center Mobile and Web Apps:

Respond to incidents while in the field, and collaborate with operators at their workstations. Security Center Mobile turns your smartphone into a mobile monitoring station that allows you to push video back to the client interface, and respond to access control alerts.

Intrusion Devices:

Achieve seamless and sophisticated integration with intrusion detection devices, unifying alarms with video, and ensuring that you are kept up-to-date with the real-time status of secured areas.

Synchronize Your Windows User Accounts:

Centralize the management and automate the synchronization of Windows user accounts with Security Center's administrator, operator, and cardholder accounts through integration with Active Directory (AD).

Video Analytics:

Choose from a range of video analytic tools developed by leading software partners who have integrated key functionality from their solutions with Security Center.

Unified Security Interface

Manage all your security operations from a single intuitive client interface. All tasks, workflows, and configurations are consolidated within Security Center, in order to provide efficient management of multiple systems and reduce the need for additional training.
