FST Biometrics

Secure Access at the Speed of Life

In a world of urbanization, globalization and technology ubiquity, providing a secure access solution for facilities, places and information is of the utmost importance. Many secure access solutions today require a key, a code, identification card or fingerprints. However, all of these options slow users down and interfere with their daily lives.

We, the team at FST Biometrics, believe that secure access should not interfere with the pace of life in the 21st Century.

Our solutions utilize biometric identification technology to provide secure access that is non-intrusive and seamless.

Our unique In Motion Identification™ (IMID) technology includes facial recognition and behavioral analytics to swiftly identify those with access authorization, while preventing entry of unauthorized visitors.

FST Biometrics is a global company, with technology roots in Israel. Our extensive experience developing secure access solutions ensures that our technology stays ahead of the curve. FST Biometrics solutions can be seamlessly integrated into pre-existing solutions and software, working side-by-side to provide the ultimate secure and seamless access.

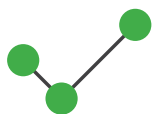

Our Technology

In Motion Identification™ (IMID) – Seamless Identification. Seamless Access.

In Motion Identification™ uses a unique fusion of facial recognition, behavioral analytics, and voice analytics. Our technology is able to identify authorized individuals from a distance, and in-motion. This means that there is no slowing down or stopping for the user. Our system provides a seamless access experience that is accurate, reliable and non-intrusive. It identifies authorized personnel quickly and efficiently. True, secure access, at the speed of life.

Our core software, **IMID Access**, which serves as the backbone of In Motion Identification, provides identity management and access control solutions, advanced visitor management, fraud detection, remote monitoring and much more.

IMID Access represents a best-in-breed fusion of technologies, including 2nd generation Biometrics, Video Processing, Behavior Analysis and, for extreme secure access needs, Voice Recognition.

High Accuracy

Fast and Efficient

Non-Invasive

Our Market

Seamless Access. Seamless Integration – for Multiple Applications and Needs.

Unlike other systems that require dedicated hardware and software, our IMID Access with In Motion Identification™ is an open system. It integrates with security and surveillance systems for smooth interoperability. Since our solution is easily implemented into many pre-existing infrastructures, it can be used in a variety of physical settings.

Enterprise and Commercial

IMID Access solutions are designed for a seamless experience of authorized and secure access. It can be easily integrated into enterprises and commercial facilities in a wide array of industries, including:

- Corporate Office Buildings and Campuses
- Healthcare Facilities
- Educational and Cultural Institutions
- Stadiums /Arenas / Entertainment Centers
- Financial Institutions
- Transportation Facilities
- Data Centers

Residential

Our solution can be integrated into residential facilities and projects. Residents approach the entrance and are granted immediate access, while guests can enter using an encrypted QR code generated by IMID Visit Access, which is sent via e-mail. For unexpected guests, our system will contact the host, who can choose to grant access to the visitor.

Governmental

In public spaces, our IMID Access solution can prevent unauthorized access to secure areas, reducing lengthy and invasive security checks. Our system increases the speed of clearing individuals without compromising security protocol.

Our Solutions

Ultimate Security. Seamless Access.

IMID Access

IMID Access, our core software solution, can be integrated into enterprises, commercial, residential and governmental facilities. The IMID Access software identifies authorized users through a combination of biometric identification technology. These can include facial recognition, behavioral analytics, and voice recognition, depending on the required security level.

IMID Access is available in three versions: Entry Level, SMB or Enterprise.

IMID Access Optional Modules

IMID Visit Access

IMID Visit Access is a software module designed to manage authorized visitors. A host can register a visitor by sending a meeting invitation, and setting the level of secure access for the visitor. Then the visitor will receive a QR code via email which he or she then show to the camera to be granted secure and seamless access.

IMID Remote

IMID Remote is a software module that allows users to manage visitors remotely. When a visitor arrives, the system will notify the host via phone, text message or email. The host can then speak to the guest directly and even grant access to the building.

IMID Extreme Security Access

IMID Extreme Security Access is a software module that provides an additional layer of biometric identification. While the base solution uses facial recognition and behavioral analytics, for extreme security situations, voice recognition and additional measures can be added to verify and ensure that only authorized users are granted access.

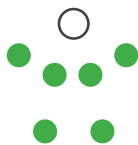

IMID Digital Doorman

IMID Digital Doorman is an all-in-one, In Motion Identification Access Kit. It includes the software, hardware and instructions that can be easily installed for secure access to offices, home and other facilities. It provides the same seamless access experience as IMID Access and includes IMID Visit Access features.

IMID Solo

IMID Solo is a fully integrated controller that delivers the most advanced, secure and convenient biometrics access control on the market.

IMID Solo enables the groundbreaking technological advantages of IMID Access in a compact version designed to support one access point. IMID Solo comes in a standalone plug and play case that powers FST Biometrics IMID Digital Doorman™ all-in-one In Motion Identification Access Kit.

Our Awards

Proven Industry Recognition

Our technology and secure access solutions have won many awards:

- **Security Product Magazine**, New Product of the Year, 2014
- **ISC West**, Best New Product in Access Control Hardware and Software, 2014
- **Security Sales & Integration**, Top 30 Technology Integrations, 2013
- **ASIS 13 Accolades**, Securities Best Winner, 2013
- **Security Technology Executive**, Security Innovation Award Winner, 2013
- **Forbes**, Innovations That Will Change the World, 2011
- **IBM SmartCamp**, IBM Global Entrepreneur Award, 2011
- **ISC West**, Best New Product Award, 2011
- **Maximum Impact**, Award Winner, at Electronic Security Expo (ESX) 2011

Leadership Overview

FST Biometrics was founded by Major General Aharon Zeevi Farkash. With a lengthy career in Israeli military and security services, including, Head of the National Directorate of Military Intelligence, Major General Aharon Zeevi Farkash has witnessed how security can invade the lives of private citizens. This experience led him to realize that security need not interfere with the lives of authorized people. He envisioned a paradigm shift that led to the creation of FST Biometrics – a solution that is non-intrusive and provides a seamless secure access experience.

Our Promise and Philosophy

Secure Access, at the Speed of Life.

Secure access to enterprises, campuses, venues and facilities, can often lead to delays and inconvenience. FST Biometrics makes this process smooth and easy with In Motion Identification™.

Our promise: Secure access, at the speed of life.

FST Global Presence

FST Biometrics is a global company with R&D and headquarters located in Israel. We have offices located internationally in the USA, and distributors in Canada, Brazil, Russia, UK, Thailand and Hong Kong. Following is our contact information:
