# CARDSONLINE

**CardsOnline is a card management system that allows you to issue and manage multifunctional cards in an easy and cost-efficient way.**

CardsOnline takes a central role in the card production and management of your organization and will reduce costs at the same time. Especially when the smart ID cards are produced and used at multiple locations.

CardsOnline provides an unlimited number of locations and users. Advanced password access ensures protection of both users and data in the entire system.

CardsOnline is your one card solution.

# EFFICIENT, CLEAR AND COST-CUTTING

No longer a wallet full of different cards is required for entrance, registration, cash register and other applications. A single card can be used for all applications. Use the card to grant access to buildings and parking spaces, for printing and locker facilities. In addition, use the same card for payment at vending machines, or to pay for lunch at the canteen.

*Printing, Encoding and Activation of a card can all be done with one print job in CardsOnline.*

Card management becomes effortless with CardsOnline. Schedule automatic expiration, reprinting of cards or manage lost cards by blocking temporarily or permanently with just a couple of clicks. By using only one system for all functionalities, you save both time and cost, while simplifying your administration.

# THE CARD PRODUCTION PROCESS

Produce smart ID cards in a couple of simple steps:

- Step 1.** Create a card design with our intuitive Card Designer.
- Step 2.** Import cardholders data automatically or add data to a data record manually.
- Step 3.** Add passport photos from Webcam or TWAIN sources using the photo capture tool with intelligent auto-capture and auto-cropping features.
- Step 4.** Batch print selected data records. Manage the inline encoding and printing process with the Card Print Manager. Easily encode all available data directly onto the card, without adding any steps to the production cycle: real inline encoding.
- Step 5.** Inform the connected facility applications about activation of the cards.

The screenshot shows the CardsOnline data manager interface. At the top, there is a navigation bar with tabs for Home, Data manager (selected), Card layouts, Print sessions, Card manager, E-PHOTO REQUEST, and IntelliMode. Below the navigation bar, there are buttons for 'Add a single record', 'Import data', and 'Batch processing'. A table displays a list of cardholders with columns for Index, Last Name, Print Count, and Cardlayouts Id. The table contains five rows of data, each with a set of icons for actions like edit, delete, and print.

Index	Last Name	Print Count	Cardlayouts Id
100004	Domingues	1	Template 1
22341687	Gangaram-Panday	1	
22339173	Goslin	1	
22341393	Boon	1	
22339499	Zwan	1

# UNIQUE STRUCTURE

CardsOnline has a unique structure to optimize the work flow of your organization. Featuring three levels for users, data and card management.

## HOST ADMINISTRATOR

Manage Groups and Group types for all individual parts of your organisation.

- Soap Data Agent
- Roles
- Languages
- Reports
- Look & Feel

## GROUP ADMINISTRATOR

Manage Units to organise your information and card designs.

- Ribbon Management
- CCI Encoding Files
- RSP/ISO number Range
- E-mail Management
- Print Sessions
- Card Term Settings

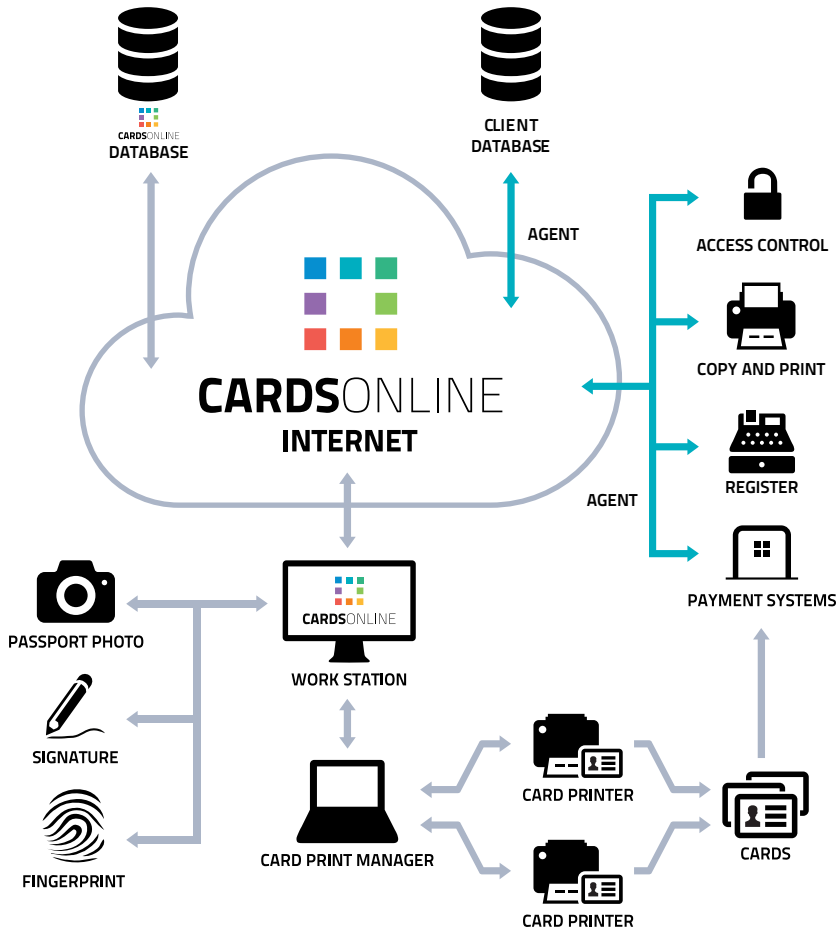

## UNIT OPERATOR

Manage cardholders data and card production

- Photo Capture/Upload
- Fingerprint
- Signature
- Card Designer
- Print Jobs
- Card Management
- Import XLS
- Manage Data Fields
- Batch Processing

# CARD MANAGEMENT SYSTEM

CardsOnline becomes the link between the smart card and other systems (e.g. access control) in your organization. Connections between these systems are established through custom made data agents and web services, defined by a data model at the start of each project.

*CardsOnline interacting with databases, hardware and other applications.*

# WEBSERVICES & DATA AGENTS

Information from external systems such as HR-systems can be shared with CardsOnline using custom data agents. CardsOnline becomes your central point for managing data, and keeping every-thing synchronized from a single point of entry.

Changes or new card holder data can be managed and your connected facility applications are automatically updated.

## FEATURES

- Cloud solution
- Centralized data management
- Connection to your databases
- Advanced user management
- Professional card design
- Import and export data
- Single or batch Printing
- Life cycle management of the card

# THE CLOUD SOLUTION

CardsOnline offers a one card solution merging ID related systems & services into one card management and production interface. CardsOnline provides two setup options:

**Local setup:** CardsOnline is installed on the local network of a customer.

**Cloud Solutio** : More and more people choose the CardsOnline Cloud Solution. It provides easy access through a web browser and only requires internet connection. So no local installation of the software, no maintenance of expensive infrastructure and knowhow. Always the latest features and functionality available. No high investment, just a monthly subscription fee covering all costs.
